Tampere, Finland

"...the real ace up my sleeve is understanding what my customers value."

Frontend-focused Full Stack Engineer with a product-minded approach. Took a SaaS startup from concept to profitability. Owning both implementation and technical strategy, as well as design systems and product direction.

I combine deep UI/UX sensibilities with scalable architecture decisions and a track record of mentoring teams toward cleaner, testable and maintainable code. Ready to step into any Full Stack role where I can define technology choices, establish development standards, and collaborate with clients to build lasting solutions.

Latest experience

Easybook, Nov 2024 - Present

Fullstack developer

I was in charge of the cloud architecture (GCP, Vercel) and development pipeline of this SaaS marketing technology product. Helped bring the company from concept into real, profitable software. Mentored several junior developers in this role.

Hitachi High-Tech Analytical Science, Sep 2023 - Nov 2024

UI developer

Developed a handheld device, using browser based UI (Vue/TypeScript). Working in a complex, multi-team environment, exceeded expectations in both programming and communication and helped build team spirit. Took responsibility of various tasks, filling in for the Scrum Master role.

Education

Master of Technology (Tampere University, 2023)

Tech Stack

Frontend

React, Tailwind, Vue, TypeScript, Cypress, Vitest

Backend

Node.js, Python, C#

Cloud
